

Name: - Laxmi Swami

Topic: - Creating and Configuring of an EC Instance On AWS for windows system

Step 1: - Name The Instance

EC2 > Instances > Launch an instance

It seems like you may be new to launching instances in EC2. Take a walkthrough to learn about EC2, how to launch instances and about best practices

Do not show me this message againTake a walkthrough

Launch an instance

Amazon EC2 allows you to create virtual machines, or instances, that run on the AWS Cloud. Quickly get started by following the simple steps below.

Name and tags

Name

Linux

Add additional tags

▼ Summary

Number of instances1

Software Image (AMI)
Canonical, Ubuntu, 22.04, amd64...read more
ami-0f9de6e2d2f067fca

Step 2 :- AMI Selection

aws

Search

[Alt+S]

EC2 > Instances > Launch an instance

▼ Application and OS Images (Amazon Machine Image)

An AMI is a template that contains the software configuration (operating system, application server, and applications) required to launch your instance. Search or Browse for AMIs if you don't see what you are looking for below

Search our full catalog including 1000s of application and OS images

Step 3 :- Instance Type (kept by default)

▼ Instance type [Info](#) | [Get advice](#)

Instance type

t2.micro

Family: t2 1 vCPU 1 GiB Memory Current generation: true

On-Demand Windows base pricing: 0.0162 USD per Hour On-Demand Ubuntu Pro base pricing: 0.0134 USD per Hour

On-Demand SUSE base pricing: 0.0116 USD per Hour On-Demand RHEL base pricing: 0.026 USD per Hour

On-Demand Linux base pricing: 0.0116 USD per Hour

Free tier eligible

☐ All generations

[Compare instance types](#)

[Additional costs apply for AMIs with pre-installed software](#)

Step 4 :- Create a key pair

▼ Key pair (login) [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - *required*

LinuxKP

↕

[Create new key pair](#)

Step 5 :- Network Setting

aws

Search

[Alt+S]

EC2

Instances

Launch an instance

▼ Network settings [Info](#)

VPC - *required* [Info](#)

vpc-0129534001eb462ff

(default)

↻

Subnet [Info](#)

No preference

↕

[Create new subnet](#)

Auto-assign public IP [Info](#)

Enable

↕

[Additional charges apply when outside of free tier allowance](#)

Firewall (security groups) [Info](#)

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group ☐ Select existing security group

Security group name - *required*

LinuxSG

This security group will be added to all network interfaces. The name can't be edited after the security group is created. Max length is 255 characters. Valid characters: a-z, A-Z, 0-9, spaces, and _-./!@,[]+=&()!\$*

Description - *required* [Info](#)

LinuxSG

Inbound Security Group Rules

▼ Security group rule 1 (All, All, 0.0.0.0/0)

Type [Info](#)

All traffic

↕

Protocol [Info](#)

All

↕

Port range [Info](#)

All

↕

Source type [Info](#)

Anywhere

↕

Source [Info](#)

Q Add CIDR, prefix list or security group

0.0.0.0/0 ✕

Description - *optional* [Info](#)

e.g. SSH for admin desktop

Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

✕

Add security group rule

➤ Here we have created a security group and All traffic is allowed.

Step 6 :- Storage Configuration

▼ **Configure storage** [Info](#)

Advanced

1x

8

GiB

gp2

Root volume, Not encrypted

① Free tier eligible customers can get up to 30 GB of EBS General Purpose (SSD) or Magnetic storage

×

Add new volume

The selected AMI contains instance store volumes, however the instance does not allow any instance store volumes. None of the instance store volumes from the AMI will be accessible from the instance

② Click refresh to view backup information

↻

The tags that you assign determine whether the instance will be backed up by any Data Lifecycle Manager policies.

0 x File systems

Edit

▶ **Advanced details** [Info](#)

Finally we clicked on launch instance.

See "man sudo_root" for details.  
  
ubuntu@ip-172-31-93-62:~$ |
```

Task 1 :- Jump back from new to linux folder and again enter to new folder.

```
root@ip-172-31-93-62: ~/devops/aws/linux/cloud/gitbash/new
root@ip-172-31-93-62:~# ls
file.txt  snap
root@ip-172-31-93-62:~# mkdir devops
root@ip-172-31-93-62:~# cd devops
root@ip-172-31-93-62:~/devops# mkdir aws
root@ip-172-31-93-62:~/devops# cd aes
bash: cd: aes: No such file or directory
root@ip-172-31-93-62:~/devops# cd aws
root@ip-172-31-93-62:~/devops/aws# mkdir linux
root@ip-172-31-93-62:~/devops/aws# cd linux
root@ip-172-31-93-62:~/devops/aws/linux# mkdir cloud
root@ip-172-31-93-62:~/devops/aws/linux# cd cloud
root@ip-172-31-93-62:~/devops/aws/linux/cloud# mkdir gitbash
root@ip-172-31-93-62:~/devops/aws/linux/cloud# cd gitbash
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash# mkdir new
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash# cd new
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# cd ../../../../
root@ip-172-31-93-62:~/devops/aws/linux# cd cloud/gitbash/new
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# |
```

Task 2 :- 1) I have created 5 files by staying in new folder and creating file in aws folder.

```
root@ip-172-31-93-62: ~/devops/aws
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# touch ../../../../newfile{1..5}.txt
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# ls
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# cd ../../../../
root@ip-172-31-93-62:~/devops/aws# ls
linux  newfile1.txt  newfile2.txt  newfile3.txt  newfile4.txt  newfile5.txt
root@ip-172-31-93-62:~/devops/aws# |
```

2) I also created 5 files by staying in aws and creating file in new folder.

```
root@ip-172-31-93-62: ~/devops/aws/linux/cloud/gitbash
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash/new# cd ..
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash# cd ../../..
root@ip-172-31-93-62:~/devops/aws# touch linux/cloud/gitbash/newfile{1..5}.txt
root@ip-172-31-93-62:~/devops/aws# cd linux/cloud/gitbash
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash# ls
new  newfile1.txt  newfile2.txt  newfile3.txt  newfile4.txt  newfile5.txt
root@ip-172-31-93-62:~/devops/aws/linux/cloud/gitbash# |
```

****Important Note :- 1) When we stop and restart the instance Public address of the instance which was provided by amazon changed. While the private IP of the system remain unchanged.**

2) When we reboot our instance both public and private IP's remains unchanged.
